

MFA Proof-of-Concept (POC) for Office 365

Multifactor Authentication may prove to be the single best thing you can do to protect your employees and data in Office 365. Many organizations have held back due to perceived complexity, licensing needs, or user experience. **No excuses! We can do this!**

Office 365 shifts many traditional datacenter security responsibilities to Microsoft, but customers are still responsible for security controls impacting their organization's data. Multi-factor authentication (MFA) is one of the most effective tools to combat identity compromise and protect your business.

In 3 steps, we'll protect your Office 365 environment:

1. Complete and discuss the *MFA Readiness Workbook*
2. Turn on Modern Auth and Enable Multi-factor Authentication (MFA) for:
 - a. Office 365 Administrators
 - b. Proof of Concept Group Members
3. Verify employee experience across applications, locations, workstations, mobile devices, and browsers

After the turnkey Proof of Concept, we'll provide:

- Final system state **documentation**.
- **Licensing guidance** (Azure AD Basic, Plan 1, Plan 2 differentiation)
- Design up to 5 additional **Office 365 MFA Use Cases**
- **Enterprise roll-out** considerations

Peters & Associates
